## THE FACTS DID YOU KNOW?

**According to the NIH, Informed Consent** is the process in which a health care provider educates a patient about the risks, benefits, and alternatives of a given procedure or intervention. Informed consent is both an ethical and legal obligation of medical practitioners in the US and originates from the patient's right to direct what happens to their body.

**Children and Informed Consent**  
According to the NIH, Children (typically under 17) cannot provide informed consent. As such, parents must permit treatments or interventions. In this case, it is not termed "informed consent" but "informed permission."  
<https://www.ncbi.nlm.nih.gov/books/NBK430827/>

**According to NIH, Adolescence is an important time for brain development.**  
The brain finishes developing and maturing in the mid-to-late 20s. The part of the brain behind the forehead, called the prefrontal cortex, is one of the last parts to mature. This area is responsible for skills like planning, prioritizing, and making good decisions.
