

IT'S THE LEGAL DESTRUCTION OF A SOUND SOCIETY

STATE OF KANSAS

SUPPORT

SB 12

Enacting the "Kansas Child Mutilation Prevention Act" to criminalize performing gender reassignment surgery or prescription of hormone replacement therapy.

SB 6

Restricting the secretary of health and environment to prevent the spread of diseases; repealing their authority to quarantine individuals.

SB 20

Requires vaccine requirement exemptions in places such as child care facilities and schools.

HB 2007

Prohibiting the secretary of health and environment from requiring a COVID-19 vaccination for care at a child care facility or attendance at a school.

THE FACTS DID YOU KNOW?

According to NIH, Adolescence is an important time for brain development.

The brain finishes developing and maturing in the mid-to-late 20s. The part of the brain behind the forehead, called the prefrontal cortex, is one of the last parts to mature. This area is responsible for skills like planning, prioritizing, and making good decisions.

According to NIH, Mental illnesses may begin to appear during adolescence.

Ongoing changes in the brain, along with physical, emotional, and social changes, can make teens more likely to experience mental health problems. The fact that all these changes happen at one time may explain why many mental illnesses—such as schizophrenia, anxiety, depression, bipolar disorder, and eating disorders—emerge during adolescence.
